GRIN Verlag Dez 2010, 2010. Taschenbuch. Book Condition: Neu. 211x146x7 mm. This item is printed on demand - Print on Demand Neuware - Bachelor Thesis from the year 2010 in the subject Medicine - Pharmacology, grade: 1,0, Harvard University (Division of Continuing Education), language: English, comment: Honors - An innovative way to provide medication to patients of Mitral valve replacement without the harmful side effects by labeling ferromagnetic nano-particles with medication such as anticoagulants and injecting them in to the blood stream the drugs can be isolated within the heart by magnetic targeting. Thus, drug levels can be maintained at low levels throughout the rest of the body. , abstract: Tissue grafts and transplants tend to get rejected by the body, and are also prone to higher rates of infection than other tissues of the human body. Thus, the patient must take immunosuppressant drugs as well as drugs that treat infections, which end up in both the tissues they are targeted for and the rest of the body. These drugs can leave the patient prone to further infection and disease, thus the drugs can end up causing as much harm as the initial infection. Furthermore, cancer and tumor medications have harmful effects on the rest of the body, and even though many of them may have specific affinity for the targeted tissue they end up in nearly the same dosages in the rest of the body since their specified tissue affinities are usually low. The Purpose of this thesis is to discuss alternative ways of delivering medication directly to the targeted tissue or organ and isolate it there. Thus having only minimal-to-none dosage throughout the rest of the body leading to minimal side effects. If a magnetic field can be set up internally by the use of external magnets...
