### Reviews

*A very amazing ebook with lucid and perfect answers. it was actually written quite flawlessly and useful. Its been written in an exceedingly basic way and it is simply right after i finished reading this publication in which basically changed me, change the way i really believe.*

Excerpt: .the flux density B as ordinates and the distance x as abscissas, (c) What is the relation between the area of this curve and this total flux? Answer.--(a) 3.18 X 106 lines, (c) The flux per pole is equal to this area multiplied by the length of the armature, which in this case is 8 inches. 88. Magnetomotive Force and Magnetic Reluctance.--The magnetic fields in most electric machinery and apparatus are due directly to electric currents.2 The relation between the magnetic  $I$  Such a sinusoidal distribution of flux is seldom actually realized in practice, but is often closely approximated, particularly in alternatingcurrent machines. s The magnetic fields of so-called permanent magnets will be considered in detail later; Article 104. flux produced by an electric current and the intensity of this current is, therefore, one of fundamental importance. The relation in question is of the same general form as that between an electromotive force and the current which it produces. Consider, for example, the magnetic field due solely to a current  $i$  in a single coil of  $N$  turns. The space in which the magnetic field exists may be thought of as divided into a number of closed rings, such as the ring  $M$  in Fig. 49, each ring being of such a shape that its walls are tangent at each point to the line of force through that point. Such rings will not in general be of a simple shape, and the cross-section of any...
